

CODE OF CONDUCT FOR SPEEDBOATS

SOME IMPORTANT INFO:

Marine turtles can often be found in shallow coastal bays and lagoons feeding, resting, cleaning or swimming. These areas are usually frequented by high numbers of divers and snorkelers. Therefore, when using a speedboat, it is essential to understand how to best drive it without injuring or affecting turtles and people!

- **GO SLOW!** In areas where you know turtles might be feeding, reducing speed is the **MOST EFFECTIVE WAY** to reduce the risk of collision.
- Make sure that there is a person on the **LOOKOUT** at the front sides of your boat. Ask your guests to help you avoid turtles.
- Do not **ANCHOR** in seagrass areas or in proximity of coral reefs as turtles may be resting or feeding at the bottom and could be hit by the anchor.
- Avoid going in very **SHALLOW AREAS** (i.e. less than 3 meters) to drop your guests. Instead, ask your guests to put their snorkeling and diving gears on and point them in the direction of the turtles from a distance.
- If you see an **INJURED TURTLE**, please report your sighting to us. We are in constant communication with specialised veterinaries that provide guidance on what to do in case of injuries.

Remember to report your sightings!
